

## **The Concept of Individualism: Its Definition and Historical Development**

Historically, the development of Individualism can be traced back to Renaissance humanism which challenged traditional religious dogmas with secular ideals centered around human potentiality and intellectuality.

As society transitioned from feudal to industrialized settings, especially during 18th century Europe's Industrial Revolution period, these ideas were further crystallized into institutional practices promoting economic liberalism like private property rights and free-market capitalism.

In recent years, however, with globalization fostering increased interconnection between different cultures, there has been growing discourse about reconciling values inherent in both individualistic Western societies versus collectivist Eastern ones - serving to redefine boundaries within modern interpretations of Individualism itself.
