Overview: Japan's Educational System

Japan's educational system is globally recognized for its high standards and impressive results. Interestingly, this system is relatively young, established only after World War II. Post-war reforms democratized education, making it accessible to all, rather than just a privileged few. This reform was part of the Allied Occupation's effort to reshape Japan into a peaceful democracy. The system was designed around the American model, and its introduction paralleled the rapid economic growth of the country. An emphasis on high-quality education and a commitment to equality allowed Japan to nurture a highly-educated workforce, which became a driving force for its economic boom. The focus was not on creative thinking and individuality, like in many Western systems, but rather on discipline, moral education, and conformity.

Understanding the Structure of Japan's Educational System

It begins with six years in elementary school, then three years each in junior high and high school. After high school, students must go to university or college for four years.
